

FERMOALE New-E

Active Dry Yeast for top-fermenting beer brewing

BEER STYLES

For American East Coast-style ales including New England IPA (NEIPA), Hazy and Juicy IPA, hazy pale ales, and pastry stouts.

AROMA & FLAVOUR CHARACTERISTICS

Intensifies hop-derived fruity notes especially of tropical fruits like mangoes, passionfruit, guava, as well as grapefruit, oranges and limes.

The yeast plays an important role in creating the texture of the beer where residual sugars and alcohol contribute to a fuller, softer mouthfeel.

PITCHING RATE / DOSAGE

Pitch directly into the wort in the fermenter, at pitch rate of:

50 - 80g/hl of cool wort at 16-23°C / 61-73°F

The pitch rate is dependent on the brewing process conditions and will affect the fermentation performance and the final taste profile of the beer.

High gravity, high adjunct or high acidity fermentations may require higher pitching rates and the addition of yeast nutrients.

STORAGE

Store in vacuum sealed packaging where possible, in dry odourless conditions, at 4°C / 40°F.

Limit exposure to air.

Do not freeze.

On opening the package, the yeast should be used immediately.

Shelf life is 36 months from production date.

Do not use after the expiry date shown on the pack.

APPLICATION

It is generally recommended that active dry yeast is pitched directly into the wort without prior rehydration.

If direct pitching is not feasible the yeast can be hydrated and pitched in liquid form.

To rehydrate dissolve the dry yeast in sterile water or in wort at 16-23°C / 61-73°F at a ratio of 1:10. Stir gently and leave for approximately 20 minutes. Gently stir again and add to the cooled wort in the fermenter.

To avoid yeast stress, ensure temperature fluctuations are minimal.
